Network+ Certification Preparation

Overview

The CompTIA Network+ certification is an international industry credential that validates the knowledge of networking professionals with at least nine months of experience in network support or administration or adequate academic training.

Earning a CompTIA Network+ certification demonstrates that a candidate can describe the features and functions of networking components, and possesses the knowledge and skills needed to install, configure and troubleshoot basic networking hardware, protocols and services.

Requirement for Network+ Certification

The key objective of the course is to provide enough information for a student to become a competent network support engineer, capable of taking and passing the Network+ Certification test.

The exam tests technical ability in the areas of media and topologies, protocols and standards, network implementation, and network support. The exam also covers new technologies such as wireless networking and gigabit Ethernet.

Admission Requirements

Grade 12 or equivalent or Mature Student Status. A typical student will have 6-12 months of post A+ Certification experience (or equivalent).

Career Opportunities

The Network+ designation is appropriate for individuals pursuing career growth opportunities in IT Infrastructure services as:

- Network Administrator;
- Help Desk Support;
- Technical Specialists

Course

On course completion, students will be able to:

- Identify network topologies, cabling, connectors, and components
- Install and configure a network card and client software
- Identify network protocols and define the concepts of network layers
- Understand and implement the TCP/IP protocol
- Identify the features of network and client operating systems (Windows, NetWare, Linux, Mac OS)
- Configure remote and wireless network connections
- Configure user and security settings for an operating system
- Use test equipment to troubleshoot network connectivity.
